

WARNING

Upgraded Ground Wire Required.

American Armature alternators are high power high output devices. The stock OE braided ground is not sufficient.

The ground must run from the alternator mount to the chassis frame. Be sure the ground contact is not painted. Use a #4 wire.

#4 ground wires are available custom made for \$15.00 plus shipping from American Armature if needed. Please identify length and eyelet size using the below chart.

Failure to provide this ground will void all applicable warranties.

Ground wire length _____

Ground wire eyelet size end #1 _____

Ground wire eyelet size end #2 _____
