APS PRESIDENT AMY LANK APPOINTED TO CIRAS INDUSTRY ADVISORY COUNCIL

Amy Lank, President of American Power Systems, Inc., has been appointed to the Industry Advisory Council for the Center for Industrial Research and Service (CIRAS) at Iowa State University.

“As the owner of an established small business, I appreciate the customized services that CIRAS provides to help companies like APS continue to learn and grow. CIRAS has helped us ‘up our game’ in strategic ways, and I’m looking forward to contributing to the Industry Advisory Council because I believe that more Iowa businesses can benefit from learning about CIRAS,” Lank said.

The purpose of the Industry Advisory Council is to provide advice to CIRAS leadership.

CIRAS is part of the College of Engineering and the Office of Economic Development and Industry Relations at Iowa State University. Since 1963 CIRAS has partnered with Iowa companies and communities to help them prosper, according to its website, www.ciras.iastate.edu.

American Power Systems, Inc. was founded in 2006 in Davenport. APS designs and manufactures customized electrical solutions for commercial and specialty vehicles with unique power needs. Clients include US Department of State, US Special Operations Command and Australian Ministry of Defense. APS also serves marine and alternative energy customers around the world.
